

IDENTITY & ACCESS MANAGEMENT

Gain awareness of everything accessing your network

Provide access consistently and efficiently without sacrificing security

Relieve the stress of complex access management

WHY IDENTITY & ACCESS MANAGEMENT

Identity Access & Management (IAM) solutions are the next-generation identity and access control policy platform.

Modern enterprise is mobile, ever-evolving and saturated with a multitude of devices. That's why it demands absolute accessibility, while you demand total security. Thankfully, with **IAM** capabilities, you don't have to choose. They meet both demands by providing vital access to tools without sacrificing security.

Features and Benefits

See and share rich user and device details. Users and devices are shown in a simple, flexible interface.

Control all access from one place. Simplify access across wired, wireless, and VPN connections.

Stop and contain threats. Reduce risks and contain threats by dynamically controlling network access. ISE can assess vulnerabilities and apply threat intelligence. It can also contain a suspicious device for remediation.

DRIVE PRODUCTIVITY

Your objective is productivity. Your concern is security. With **IAM** capabilities, you can have both.

The **IAM** platform automatically gathers real-time data throughout the network to dynamically control with additional context, no matter how and from where your network is being accessed.

It simplifies onboarding experience by enabling enterprise mobility through easy, intuitive, self-service portals that get them onto the network quickly and easily, minimizing IT headaches.

And it manages networks wide access policy enforcement.

.....
The IAM capabilities offer superior profiling capabilities supported by automatic updates, seamless integration with market-leading mobile device management, security information and event management, threat defense platforms and more.
